Specifications for LEGI Swinging Gates

Gate Posts consist of square tube steel, 100 mm sq. (3.96") or larger, with welded and smoothly finished head and foot plates.

Gate Wings are composed of LEGI mesh or vertical steel bars 20 x 30 mm (.79" X 1.18") framed with rectangular tube steel 60X40 mm (2.36" X 1.57") or larger.

Gate Suspension Joints shall remain completely within the gate profile. Gates can be opened to either 135° or 185°.

Base Bolt to be contained within the frame of the gate wing and can only be raised when the opposite gate wing is open. Base bolt lock optional.

Locks are galvanized and shall have anodized latches and plates.

Corrosion Protection. Steel parts are hot-dip galvanized after fabrication with minimum 80 µm zinc (1.8 oz./sq.ft.), mechanically cleaned and roughened with stainless steel sandblast for optimum coating adhesion, and powdercoated with non-lead, UV-stable polyester powder paints, thermally set. Standard colors are Forest Green (RAL 6005), Winter White (RAL 9010), Stone Gray (RAL 7023), Anthracite (RAL 7016) or Jet Black (RAL 9005 - limited option).
