

LEGI-R INSTALLATION INSTRUCTIONS

Step mesh panels.

Both mesh panels hung at same height on R post.

Left-hand mesh panel hung normally, right-hand mesh panel between 0-200mm lower.

Assembly:

The posts can be set anywhere between 0-200mm height increments to accommodate ground slope. After hanging the mesh panels on the posts, the clamping bar is attached (per instructions on page 1).

Note:

Lower mesh panel height can be adjusted as much as 200mm. This is achieved by securing, but not completely tightening the clamp bar, then adjusting mesh panel to the desired step, and finally tightening the clamp bar completely. Remember to not overtighten the bolts.
